

intelliQ – Requirements

Administrator

1. Definition of the questionnaires: questions, answers, and flow.
2. Design capability of the frontend for answer submission.
3. Export of answers in structured formats (json, csv).
4. Categorization of questions with keywords.
5. Graph displaying responses per question.
6. Ability to view the history of questionnaires and responses (for administrators).
7. Statistical analysis of responses.
8. Use of HTTPS encryption for security.

User

1. User identification for non-anonymous responses.
2. Questionnaire response.
3. Restriction of responses for specific user identity masks (e.g., **@ntua.gr*).
4. Anonymous responses.
5. Ability to switch between Greek and English "on the fly."
6. Activation of the submission option only when specific questions have been answered.
7. Display of a summary of responses after submission.
8. Unique responses.
